1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-21, drawn to a dust cover in combination with a magnetic lock, classified in class 70, subclass 159.
- II. Claims 22-23, drawn to a method of operating or manufacturing a firearm with breech block in combination with a dust cover, classified in class 42, subclass 90.
- 2. The inventions are distinct, each from the other because:
- 3. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as evidenced by claims 13 and [22 or 23]. The subcombination has separate utility such as with a firearm that does not included a sliding breech block or absent a firearm at all.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, restriction for examination purposes as indicated is proper.
- 5. Applicant is advised that the reply to this requirement to be complete **must include an election of the invention to be examined** even though the requirement be traversed (37 CFR 1.143).
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Johnson whose telephone number is 571-272-6877. The examiner can normally be reached on Tuesday through Friday.
